

Week beginning 10th June 2019

In maths we are talking about multiplication. We used maths language such as multiplication, multiples of, times, lots of and groups of. We solved simple number sentences by representing numbers in groups

Then we looked at arrays, another way of representing multiples. In these operations groups can be clearly seen and prove that in multiplication numbers are commutative i.e. they can be either way around (2x3 or 3x2).

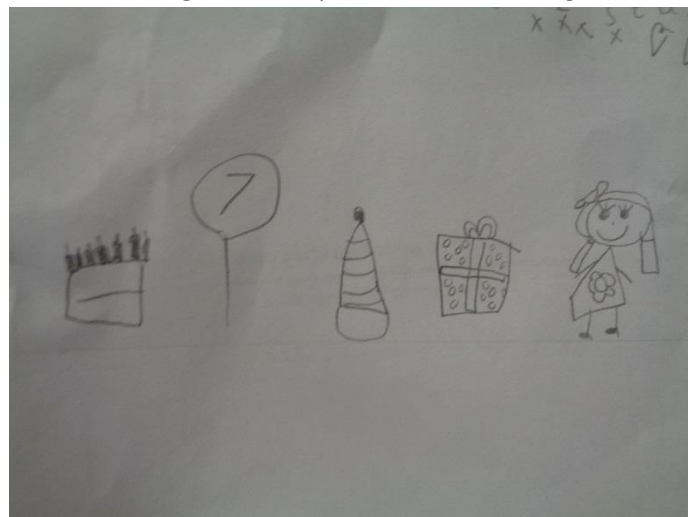

Our mini-beast studies have inspired many children to look at bugs outside the school and some have shared facts, photos and even sculptures of some of the bugs they have found.

In ICT children generated different fonts, varying their style, colour, shape and size to produce letters and words in many different ways.

Children had the opportunity to design their own invitations in guided reading. First we looked at an invitation to a fictitious Birthday party, then we used our comprehension skills to decide what essential information it was giving us, date, time, place etc. With our new knowledge we had fun creating our own special invitation designs.

Poetry is the theme of our English lessons this week. We have been looking at a poem about mini-beasts called 'Look and Leave'. We spotted nouns, verbs and adjectives in the poem and then thought of more words that we could use to write our own poems about mini-beasts next week.
